**HONORARY COMMITTEE**

Prof. dr Boris Pasalic, Minister of Agriculture, Water Management and Forestry of Republic of Srpska, Bosnia and Herzegovina  
Mr Srdjan Rajcevic, Minister of Scientific-Technological Development, Higher Education and Information Society of Republic of Srpska, Bosnia and Herzegovina  
Prof. dr Mario T. Tabucanon, President of the International Society of Environment and Rural Development, Japan  
Prof. dr Milan Kulic, Rector of the University of East Sarajevo, Bosnia and Herzegovina  
Prof. dr Dusan Zivkovic, Dean of the Faculty of Agriculture, University of Belgrade, Serbia  
Dr. Maurizio Raeli, Director of the Mediterranean Agronomic Institute of Bari, Italy  
Prof. dr Metin Aksoy, Rector of the Selcuk University, Turkey  
Prof. dr Aleksey Andreev, Rector of the Perm State Agro-Technological University, Russia  
Prof. dr Antanas Maziliauskas, Rector of the Vytautas Magnus University Agriculture Academy, Lithuania  
Prof. dr Alexey Yu. Popov, Rector of the Voronezh State Agricultural University named after Peter The Great, Russia  
Prof. dr Barbara Hinterstoisser, Vice-Rector of the University of Natural Resources and Life Sciences (BOKU), Austria  
Prof. dr Sorin Mihai Cimpeanu, Rector of the University of Agronomic Sciences and Veterinary Medicine of Bucharest, Romania  
Doc. Ing. Klaudia Halászová, Rector of the Slovak University of Agriculture in Nitra, Slovakia  
Prof. dr Calin D. Oros, Rector of the Valahia University of Targoviste, Romania  
Prof. Dr Katerina Melfou, Dean of the Faculty of Agriculture, University of Western Macedonia, Greece  
Prof. dr Amr Ahmed Mostafa, Dean of the Faculty of Agriculture, Cairo University, Egypt  
Prof. dr José Sergio Barrales Domínguez, Rector of the Chapingo Autonomous University, Mexico  
Prof. dr Davut Karayel, Dean of Faculty of Agriculture, University of Akdeniz - Antalya, Turkey  
Prof. Dr EGUCHI Fumio, Rector of the Tokyo University of Agriculture, Japan  
Prof. Dr Zeki Bayramoğlu, Dean of Faculty of Agriculture, University of Selçuk- Konya, Turkey  
Dr Chokri Thabet, the General Director of the High Agronomic Institute of Chott Mariem, Sousse, Tunisia  
Prof. dr Ivan Yanchev, Director of the Institute of Animal Science- Kostinbrod, Bulgaria  
Prof. dr Seyed Hamidreza Sadeghi, Professor at Tarbiat Modares University and the President of the Watershed Management Society of Iran, Iran  
Prof. dr Francesco Tei, Director of the Department of Agricultural, Food and Environmental Sciences, University of Perugia, Italy  
Prof. dr Viktor Kaminskyi, Director of National Scientific Center „Institute of Agriculture of NAAS“, Kyiv, Ukraine  
Dr. Igor Hrovatič, President of South Eastern Advisory Service Network, Croatia  
Prof. dr Mirza Dautbasic, Dean of the Faculty of Forestry, University of Sarajevo, Bosnia and Herzegovina  
Prof. dr Bozidarka Markovic, Dean of the Biotechnical Faculty, University of Podgorica, Montenegro  
Prof. dr Rade Jovanovic, Director of the Institute for Science Application in Agriculture, Serbia  
Prof. dr Lazar Radovanovic, Dean of the Faculty of Economics Brcko, University of East Sarajevo, Bosnia and Herzegovina  
Prof. dr Vojislav Trkulja, Director of Agricultural Institute of Republic of Srpska - Banja Luka, Bosnia and Herzegovina  
Dr. Branka Kresovic, Director of the Maize Research Institute “Zemun Polje”, Serbia  
Prof. Dr. Jegor Miladinović, Director of the Institute of Field and Vegetable Crops, Serbia  
Prof. dr Nedeljko Tica, Dean of the Faculty of Agriculture, University of Novi Sad, Serbia  
Prof. dr Rodne Nastova, Director of the Institute for Animal Science, Skoplje, Macedonia  
Prof. dr Sasa Orlovic, Director of the Institute of Lowland Forestry and Environment, Serbia  
Prof. dr Jonel Subic, Director of the Institute of Agricultural Economics, Serbia  
Prof. dr Branko Kovacevic, President of the Academy of Engineering Sciences of Serbia, Serbia  
Prof. dr Radovan Pejanovic, President of Balkan Scientific Association of Agricultural Economics, Serbia

**SCIENTIFIC COMMITTEE**

Chairman: Academician Prof. dr Dusan Kovacevic, Faculty of Agriculture, University of Belgrade, Serbia  
Prof. dr Machito Mihara, Tokyo University of Agriculture, Japan  
Prof. dr John Brayden, Norwegian Agricultural Economics Research Institute (NILF), Norway  
Prof. dr Steve Quarie, Visiting Professor, School of Biology, Newcastle University, United Kingdom

## PREFACE

Dear colleagues,

The Faculty of Agriculture of the University of East Sarajevo (Bosnia and Herzegovina), the Faculty of Agriculture of the University of Belgrade (Serbia), and CIHEAM - Mediterranean Agronomic Institute of Bari (CIHEAM Bari, Italy) organized from 6 to 9<sup>th</sup> October 2022 on Jahorina mountain (East Sarajevo, Bosnia and Herzegovina) the 13<sup>th</sup> International Scientific Agriculture Symposium “AGROSYM 2022”. The symposium was organized for the third time in a hybrid format, with in-person participation (around 300 participants) and online participation (400 participants), because of the prescribed restrictions caused by the COVID-19 pandemic and the world’s political situation.

AGROSYM 2022 made an important contribution to agriculture science and practice in different topics: plant production, plant protection, animal husbandry, environmental protection, organic farming, agroforestry, agroecology, and rural development. The Symposium topics cover all branches of agriculture as well as forestry and agroforestry. The scientific committee received around 700 papers and after review, it accepted 668 papers, 159 for oral presentations and 509 for poster presentations, which represents over 1500 authors from more than 80 countries worldwide.

During AGROSYM 2022, we had the opportunity to share the results of the current research at the international level and new information relating, inter alia, to biotechnology, world markets and agricultural knowledge and innovation systems in the European Union, especially in plenary papers. Based on many investigations, we can see that practices based on the concept of sustainable agriculture are gaining more and more attention. The goal for sustainable agriculture must be to meet society’s needs, not only the production of goods such as food and fiber but also the maintenance or restoration of ecosystem services such as watershed protection, healthy soil and the biodiversity on which humanity depends.

Big thanks to all members of the scientific committee and the staff from the symposium secretariat for their continued efforts and hard work that made this symposium possible and successful. I should like to thank my colleagues from the organizing committee, particularly the Dean of the Faculty of Agriculture of the University of East Sarajevo, professor Vesna Milic, as a host and chairperson. Special thanks to His Excellence, Prof. Sinisa Berjan, for all he has done to bring this event together; it has been a considerable logistical exercise.

Finally, I would like to thank all the authors, reviewers, session moderators and colleagues for their help in preparing and editing these e-Proceedings. Special thanks go to the organizers, partners and sponsors for their unselfish collaboration and comprehensive support.

Editor in Chief

East Sarajevo, 25 October 2022

### Abstract

The work presents main findings from investigations of our and other different researcher carried out on different cultivars using chitosan, its derivatives, nanoparticles and other antritranspirant compounds (like Di-1-p-menthene). The work demonstrates that this chitosan (and other antitranspirants) is highly effective against the most dangerous diseases and pathogens in different cultures. Also, natural origin of chitosan (and also, other antitranspirants) makes it suitable for use in organic agriculture. Furthermore, it also contributes to improving yield and different plant physiological and growth parameters. Additionally, it induces excellent resistance to some abiotic stresses (drought, salt, and low temperature) and reduces their negative impact on different cultivars.

**Key words:** *antritranspirants, phytopathology, organic agriculture, yield, yield components, quality of crop yield.*

### Introduction

This article presents the some findings from investigations carried out on different cultivars using chitosan, as antritranspirant compounds. Research into the use of that substances in agriculture is growing in popularity. Since 2000, more than 200 original scientific articles indexed in different databases have been published on this topic. Many researcher of the topic focused mainly on main cereals, but application in other cultures is not neglected. Also, natural origin of chitosan makes it suitable for use in organic agriculture. Chitosan is a derivative of chitin and is considered the second most common polymer in the world after cellulose and it is classified as polysaccharides containing randomly distributed  $\beta$ -(1-4)-linked D-glucosamine and N-acetylglucosamine units. Chitosan is mainly obtained from different sea invertebrates obtained from seafood processing. Furthermore, the potential to receive it from waste fungal mycelium is also indicated. In agriculture, chitosan is used through foliar application to plants, seed treatment, or as a direct soil fertilizer. The work demonstrates that this chitosan is highly effective against the some vicious diseases and pathogens in a crops. Furthermore, it also contributes to improving yield, yield components, as well as some chemical and biochemical parameters, as indicators of crop yield quality. Additionally, it induces excellent resistance to some abiotic stresses (drought,

salt, and low temperature) and reduces their negative impact on different cultivars. However, further studies are needed to demonstrate the full field efficacy of chitosan (and also, other antitranspirants, such as Di-1-p-menthene).

### Material and methods

The conditions for growing crops are stated in the works Waisi et al. (2014) and Dragičević et al. (2016). A micro-trial (plot size 1m<sup>2</sup>) was set up in spring barley, on degraded chernozem (Zemun Polje location, Serbia), where the first treatment was carried out at the end of the vegetative phase of this crop's development. The experiment for apples was set up in an orchard in Padinska Skela (Serbia) on alluvial soil. The elementary plot consisted of 5 apple trees, and the first treatment was carried out at the beginning of flowering. The conditions of standard chemical (ICP-OAS), biochemical (different methods) and microbiological analyzes are stated in the papers Waisi et al. (2014), Dragičević et al. (2016) and Živković et al. (2018).

### Results and discussions

In Table 1 we see that chitosan-treated barley plants give the highest average yield over two years (2013 and 2014), despite unfavorable agrometeorological conditions. However, this is not due to the increase in the mass of 1000 grains of barley (Table 1). In Table 2, we show the availability of different nutrients (inorganic P,  $\beta$ -carotene, Mg, Ca, Fe, Zn and Mn) in barley seed, expressing them relative to the phytate, unavailable form of phosphorus, so that the lower the values of this ratio, the increased availability of these nutrients, both for germination of barley seeds and in the diet of domestic animals and humans. Chitosan has a particularly beneficial effect on the availability of inorganic phosphorus, beta carotene, while moderately increasing the availability of trace elements (Table 2). Chitosan is known to have a beneficial effect on the resistance of crops and other plants to abiotic stresses (Ludwig et al., 2010; Iriti et al., 2010; Safaei et al., 2014; Hidangmayum et al., 2019; Kocięcka and Liberacki, 2021), but from the attached we can conclude that it also increases their nutritional value (Table 2; Dragičević et al., 2016).

Table 1. Grain yield and 1,000 grains weight of barley (cv. Apolon) influenced by the different foliar fertilizers (according: Dragičević et al., 2016).

Treatment	Grain yield (kg ha <sup>-1</sup> )			1000 grain weight(g)		
	2013	2014	Average	2013	2014	Average
Control	3231.7	922.3	2077.0	37.80	29.09	33.44

Chitosan also has a beneficial effect on the yield and yield components of apples (Tables 3 and 4). Since chitosan has so far been mainly tested on cereals, with rarer examples of its beneficial effects on vegetables and herbs, (Ludwig et al., 2010; Iriti et al., 2010; Safaei et al., 2014), this preliminary finding seems encouraging (Table 3 and 4), particularly because the season (2014) in which we tested influence of chitosan on apple yield and quality of yield was very humid.

Table 3. The effect of different foliar fertilizers on average and relative apple yield and different parameters of quantity of apple fruits (according: Waisi et al., 2014).

Type of fertilizer	Average (kg/ t) and relative (%) apple yield per trunk and per elementary area (1 ha)				different quantity (g/ %) parameters of apple fruit	
	Average yield per trunk (kg)	Relative yield per trunk (%)	Assesed yield per ha (t/ha)	Relative yield per ha (%)	Averaged weight of fruit (g)	Relative weight of fruit (%)

Chitosan (plant& schell extract)	56.465±13.161	353.26	-	5.00	4.55	5.34
Cirkon (plant extract)	34.833±6.363	217.92	-	5.07	4.35	6.74
Cropmax (aminoacid fertilizer)	30.527±9.813	190.98		4.87	4.55	6.54

It should be mentioned that chitosan induces increased resistance of crops (Iriti et al., 2010; Sanchez-Vallet et al., 2014; Trouvelot et al., 2014; Ghule et al. 2021) to biotic factors (fungi, bacteria, etc.), while the mechanisms of action of chitosan on these processes are still being investigated. These conclusions we proved by our preliminary work (Živković et al., 2018).

 Table 5. Effects of chitosan on *A. alternata* and *C. gloeosporioides* decay on apple fruits (according: Živković et al., 2018).

Treatment	<i>A. alternata</i> lesion diameter (mm)	<i>C. gloeosporioides</i> lesion diameter (mm)
Control +	26.33 ± 0.57 a	33.50 ± 1.32 a
Chitosan 1 mg/ml	21.50 ± 0.50 b	26.00 ± 1.00 b
Chitosan 2 mg/ml	17.50 ± 1.32 c	17.67 ± 1.55 c
Chitosan 3 mg/ml	8.33 ± 1.15 d	11.00 ± 1.00 d
Control -	0.00 ± 0.00 e	0.00 ± 0.00 e

### Conclusion

In this brief review, we have shown that chitosan affects the yield and yield components of arable (Tables 1-2) and fruit (Tables 3-4) crops, and also the resistance of stored fruit (Table 5) to some of the important diseases that can reduce the quality of fruit yield. Further directions of research will concern different formulations of chitosan and other antitranspirants, whereby the emphasis will be on monitoring a number of quality indicators of crop yields.
